DECIDE

1

CODE DECIDES, THE LLM WRITES

The duelist's price, day and accept are code; Haiku only writes the words, in ≈ 2 s instead of 9.4 s.

Guards in code, not in the prompt.

BECAUSE A 15 S TICK DOESN'T WAIT

2

2 WRITERS · 1 ORCHESTRATOR · 14 WATCHERS

Two roles act, one Chief decides, fourteen read-only daemons sense. Every hard limit is a written **GUARDRAIL** line.

BECAUSE ONE KEY, 5 REQ/S AND 1 ACCEPT PER TICK ARE SHARED

3

REDESIGNED EVERY NIGHT, PRESSURE-TESTED

Each night we rebuilt on the day's data. Saturday night the duelist went code-first (**547 tests green**) and ran on the simulator; contrarian agents and verifiers re-checked every big change; **163 tests** guard the bots.

BECAUSE THE AUTHOR CAN'T GRADE ITS OWN WORK

Sunday duelist: branch duelist-loop @ f57a002

WHAT WE **LEARNED**

TECHNICAL

REAL-TIME SHARED CONTEXT IS EVERYTHING

Day one, three people and their agents worked in silos. By Sunday every agent saw every update as it happened.

LUCAS · ALEKS

NEGOTIATION

TIME CAN BEAT PRICE

A fast good deal beats a slow perfect one: every round of talk costs value, and silence is free.

ALEKS · LUCAS

MARKETPLACE

PEOPLE OUTWEIGH INCENTIVES

Zero commission wasn't enough. Human interaction and relationships still outweighed incentives and LLM tactics.

DANI · ALEKS

THREE HUMANS SET THE LIMITS. CLAUDE DID THE WORK, AND CHECKED ITSELF.
