WRITES

READS

Sunday duelist: branch duelist-loop @ f57a002

ONE TEAM KEY · 5 REQ/S
1 ACCEPT PER TICK

LVL 02/03 | Control room

WHO DECIDES, WHO ACTS, WHO CHECKS

→ AUTHORITY / GAME WRITE - - - → DATA

DECIDE

1

CODE DECIDES, THE LLM WRITES

The duelist's price, day and accept are code; Haiku only writes the words, in ≈ 2 s instead of 9.4 s.

Guards in code, not in the prompt.

BECAUSE A 15 S TICK DOESN'T WAIT

2

2 WRITERS · 1 ORCHESTRATOR · 14 WATCHERS

Two roles act, one Chief decides, fourteen read-only daemons sense. Every hard limit is a written **GUARDRAIL** line.

BECAUSE ONE KEY, 5 REQ/S AND 1 ACCEPT PER TICK ARE SHARED

3

REDESIGNED EVERY NIGHT, PRESSURE-TESTED

Each night we rebuilt on the day's data. Saturday night the duelist went code-first (**547 tests green**) and ran on the simulator; contrarian agents and verifiers re-checked every big change; **163 tests** guard the bots.

BECAUSE THE AUTHOR CAN'T GRADE ITS OWN WORK

Sunday duelist: branch duelist-loop @ f57a002

WHAT WE **LEARNED**

TECHNICAL

REAL-TIME SHARED CONTEXT IS EVERYTHING

Day one, three people and their agents worked in silos. By Sunday every agent saw every update as it happened.

LUCAS · ALEKS

NEGOTIATION

TIME CAN BEAT PRICE

A fast good deal beats a slow perfect one. And people still decide: alliances made in the room outweighed agent tactics.

ALEKS · LUCAS

MARKETPLACE

TRUST MOVES TRADES, NOT FEES

Zero commission wasn't enough. Trust and returned favours brought trades to our market; incentives can break.

DANI · ALEKS

THREE HUMANS SET THE LIMITS. CLAUDE RAN THE BAZAAR, AND CHECKED ITSELF.

FIVE BELIEFS OUR DATA BROKE

	WE BELIEVED	WHAT BROKE IT	WHAT WE CHANGED
Dealers	Any trade at a gain scores, dealers included.	Dealer gains clip to 0, losses count in full: RET-09 at 87, worth 77 → -10 . v	Pages close only through team trades. Dealers only for the ladder; autoflip killed.
Duels	An LLM should negotiate the duels.	LLM decisions took 9.4 s on average, 29 % over 10 s ; Sunday's tick: 15 s. v	Code decides, Haiku only writes. 8 s failover. Duels III: 57 of 68 closed. v
Scoring	Trade gains cap at 50 per round (10:31).	A 5 P sale moved neg_points 50.0 → 52.2 at 12:17. v	Corrected at 12:22. Buyers back on; the next +50 trade, CHA-11, added +1.48 . v
Rivals	A trade is good if we gain.	CHA-11 from Team 10: we gained +1.48, so did Team 10 . v	Lock the lead (13:12): zero trades with the five closest rivals.
Market	A 0 % fee venue attracts trades.	v10 at 0 %: 0 fills today by 10:45. v	We pushed pairs and partners onto v10: our RET-01 pair, Team 13's bot, Team 10's listings. 8 fills by the close . v

WHERE THE POINTS CAME FROM

37.26

#1 · LEAD 3.09 · 13:20 V

Game points at 13:20 (tick 2422) by the part of the system that earned them; final board 37.73 · V measured L modelled

Scored 0: RET-11 at 240 · MAL page · cash held v10: the seller bounty paid nobody Not shown: judges' 40 · Grand Final

WHAT WE BUILT **AROUND** THE BAZAAR

A MARKET WITH MORE THAN TWO SIDES

THE CLUB MATCHMAKER

We estimate **every team's album from the public feed** and shared want-lists, match one team's spare copy to another team's missing card, page-closers first, and price each deal **between the two values**, so both sides gain.

Six teams invited to a club, with hosting **designed to rotate across members' markets**, so the matching pays more than one venue.

`tools/matchmaker.py · intel/club-pitch.md · brokered RET-01 Team 2 → Team 8 on v10`

DEMAND MODEL + HUB

What **every card is worth to every team**, from public behaviour alone, no LLM. A shared Neon archive keeps the history the 500-event feed drops.

`hub/demand.py · hub/README.md`

MARKET TEST LAB

A recorder captures **every bench session**; an offline simulator tests broker strategies against the free stall before we risk a bond.

`broker/record_bench.py · broker/sim.py`

LIVE REACTOR

Reads the public **event stream** without our key, flags every ask we can take at a gain, and **pages the Operator** and our phones.

`tools/reactor.py · tools/notify.py`

JUDGES' SHOWCASE

Dani's live dashboard and a **/show** page: read-only, built to run offline, the whole game on one screen.

`dashboard/server.py · dashboard/show.html`
